Subject: Please continue to do what's best for blue crabs!

Dear Commissioner Green,

Thank you for not reopening the winter dredge fishery. While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
William Burch

Dear Commissioner Green,

Thank you for not reopening the winter dredge fishery. While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. It makes no sense to me to encourage harvesting of female crabs that are essential to restoring the population and are already stressed. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Peter Mason

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions. I live on the Rappahannock River just north of the Norris Bridge. If we are lucky enough to catch any crabs because of the hundreds of commercial crab pots that lay off the end of my pier I considerate myself lucky. And that's only during the first 3 weeks in August. It is sad to see where the crab population is now. If you don't slow the harvesting down there won't be any crabs left. The days of commercial crabbers depending on the harvesting of crabs a necessity for survival are long gone. These guys today see it as extra money, a side job. I clearly remember crabbing on the Potomac river in the mid 1960's. Lowering our string with a chicken neck tied on and a bolt used as a weight off the end of our pier...on St George's Island. If you don't cut back on harvesting and restrict catching females there will be no more crabs.

Sincerely,
Susan Riggs

Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

Personally I have 2 crab pots on a dock in Va Beach. Harvest is 50% less in 2024 than it was in 2023, which was the lowest until then. I'd be happy to share exact numbers by month if you prefer real data. Of course there are many possible causes of this. However, taking adult females is the worst possible action to restoring the crabs to a level where both recreational and commercial crabbers can enjoy the benefits of the Chesapeake Bay.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Dear Commissioner Green,

Thank you for not reopening the winter dredge fishery. As a waterfront citizen, I have noticed the population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Please support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. I believe we do not yet fully understand potential impacts on crab population of a December extension that would increase the number of hours watermen can harvest daily.

We have over harvested so many species in our history. I strongly urge a more cautious approach, for the environment's sake. I can appreciate the impact on family income, but a devastated fishery has a much longer impact.

Sincerely,
Lynn Gilbert

I write these emails at the request of the Chesapeake Bay Foundation. It seems that they are constantly needed to keep the VMRC from buckling under pressure from commercial interests.

I'm originally from New Jersey where the NJDEP had the interests of the environment come first. It was not uncommon for recreational fishermen to catch crabs 9 inches claw to claw. I've never seen one that big in Virginia. The NJDEP doesn't allow harvesting of Menhaden in inshore waters using spotter planes and purse seines. Only Virginia allows this harmful practice.

Please follow the CBF request/guideline above. We all need it for a healthier bay.

Sincerely,
Robert Naujelis

Subject: Please continue to do what's best for blue crabs!

Dear Commissioner Green,

Thank you for not reopening the winter dredge fishery. While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Peter Jeydel

While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
John palmer

Subject: Please continue to do what's best for blue crabs!

Dear Commissioner Green,

Thank you for not reopening the winter dredge fishery. While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Janet Wooldridge

While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Edward Allenby

Subject: Love the blue crabs!!!

Dear Commissioner Green,

Thank you for NOT reopening the winter dredge fishery!!! While there have been signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest. Winter dredging captures mostly adult females wintering in the muddy bottom.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension, along with the significant increase in number of hours watermen can work each day, should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Sue Mangan

Dear Commissioner Green,

Thank you for not reopening the winter dredge fishery. While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Robert Blackburn

Dear Commissioner Green,

The Blue Crab is a keystone species in our waterways, both as a predator and prey and many other creatures living in the Bay region are highly dependent upon their survival. I live on the Indian River in Chesapeake, Virginia. I have been working with the Friends of Indian River and other environmental groups to restore the ecosystem of the Indian River and the surrounding lands. The Indian River also hosts commercial and recreational fishing for the blue crabs.

I was very pleased to see that the winter dredge fishery is not be re-opened. While we have seen signs of improvement, the blue crab population in our waterway is not especially abundant. We have a restored oyster reef on my property, and blue crabs are an occasional site, but not that common. Our waterway is not ready for an expansion of a commercial harvest that focuses on adult females.

Please give crabs a greater opportunity to expand their population in the Indian River and across the Chesapeake Bay.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Rogard Ross

Subject: Please continue to do what's best for blue crabs!

Dear Commissioner Green,

Thank you for not reopening the winter dredge fishery. While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Alison Nichols

The top two paragraphs were provided to me by the Chesapeake Bay Foundation. I am a life-long resident of the Chesapeake Bay watershed. I spent my childhood in Joppa, Maryland, enjoying crabs during the non-"R" months. I am aware that crabs are in demand all year round, but please, think about how to sustain the supply rather than depleting it during our lifetime.

Thank you.

Sincerely,
Marjorie Jones

Dear Commissioner Green,

In my professional opinion, the blue crab population has not yet reached a level of abundance that would justify expanding the commercial harvest focusing on adult females.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension are unknown at this time. Therefore, erring on the side of conservatism is justified in this matter.

Sincerely,
John Casana

Subject: Please continue to do what's best for blue crabs!

Dear Commissioner Green,

I appreciate all the VMRC is charged with managing. It's a lot! I have worked with VMRC on Joint Permit Applications in the past. Today I write about blue crabs.

I am an angler and recreational user of the Bay and several bay rivers, mainly the Rivanna and James, but also other rivers. All the major fisheries in the Bay need help. Shad are the worst off. Stripers are not doing well. Crabs need to be on a regular upward population trend and they are not. And menhaden, don't get me started on menhaden. Back to blue crabs...

Thank you for not reopening the winter dredge fishery. While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Subject: Please continue to do what's best for blue crabs!

Dear Commissioner Green,

Thank you for not reopening the winter dredge fishery. While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Diana Welles

Dear Commissioner Green,

Thank you for not reopening the winter dredge fishery. While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Kelly Saunders

Dear Commissioner Green,

I was extremely happy to see the continued closure of the winter dredge blue crab fishery in my home waters of Chesapeake Bay. This is too important an issue, and we are too far below the required healthy/sustainable stock biomass, to reopen, especially to target the female crabs that are the future of our fishery.

I would ask VMRC to keep the current season dates that were put into place in June. Increasing fishery pressure/impact with a December extension needs to be studied and well understood before adding this to the season. I love Blue Crabs, and as the current stewards of the commercially and recreationally important animal and its fishery, we need to be appropriately cautious to ensure it continues as the living symbol of the Chesapeake.

Sincerely,
Matthew Roach Roach

While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Edward Tschann

In addition, I think all can agree there are forces that are changing in the bay and are affecting blue crab populations as well as other marine fauna. We must ensure a safe marine environment while sorting all these variables. Especially with increasing blue catfish, warming water, snakeheads, etc. Let not confuse the picture more and make sure we save our resources first.

Sincerely,
Robert Beskin

While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Brian Devine

Subject: Please continue to do what's best for blue crabs!

Dear Commissioner Green,

Thank you for not reopening the winter dredge fishery. While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Jacqueline Dwyer

Dear Commissioner Green,

Thank you/ VMRC Team for *Not reopening the winter dredge fishery.

Yes, seeing some signs of improvement; but, populations have not yet rebounded enough to winter dredge females.

I urge VMRC to maintain the current season dates (that were adopted in June) plus allowable daily work hours.

Thank you for careful consideration on this critical Va. and National resource.

Sincerely,
John Reeves

While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
David Calvano

Dear Commissioner Green,

When I was a kid vacationing on the Rappahannock River, we were trained not to keep female crabs. Ever.

Now that we live at the River, we continue that tradition, and I'd like to see it expanded.

Thank you for not reopening the winter dredge fishery. While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

We need to protect future fisheries as well as considering today's needs.

Sincerely,
Beth Sandbach

Subject: Please continue to do what's best for blue crabs!

Dear Commissioner Green,

Thank you for not reopening the winter dredge fishery. While there may be signs of improvement, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
William Bolton

Subject: Please continue to do what's best for blue crabs!

Dear Commissioner Green,

Thank you for not reopening the winter dredge fishery. In an earlier career I participated in fisheries management law enforcement. While there may be signs of improvement in Chesapeake Bay, the blue crab population has not yet reached a level of abundance that would justify expanding the particular commercial harvest that focuses on adult females. Thank you for your support of keeping the winter dredge fishery closed during the upcoming season.

I urge VMRC to maintain the current season dates that were adopted in June. The impacts of a December extension along with the significant increase in number of hours watermen can work each day should be fully understood prior to adding additional seasonal extensions.

Sincerely,
Peter Fontneau
